

Case Management Plan: Each team will develop a comprehensive plan that demonstrates attention to the client's unique strengths, needs, and preferences. The plan should include client goals and the services that the team members (as the primary case managers) will provide and the services that will be referred to community resources (identified in the Resource File project). Resources included in the plan should reflect that the team understands the community resources (their purpose, availability, accessibility, the client's eligibility, etc.). The plan should also include time frames, how linkage will occur, and how monitoring will occur.
